

Amanara Renewable Energy Pvt. Ltd.

Amanara Renewable Energy

Address: H.N. 96/1,FN.604-B,JAITALA,RACHANA MEGHSPARSH APT,RANAPRATAP NAGAR, NAGPUR - 440022, MAHARASHTRA,
Mail ID - punseanil@gmail.com ,Mob- 9404123013,9420479490

Open Access

Open Access:

Are you a corporate with a high demand for electricity? Or looking to reduce your electricity bills? We provide the solution you seek.

- Open Access model is for the industrial and commercial clients who want electricity directly from the Generator at an optimum price. The customer pays for the electricity supplied to it directly from the Generator under a long-term Power Purchase Agreement(PPA).
- The Electricity Act, 2003 allows power consumers to avail non-discriminatory Open Access. In line with this, regulators allow consumers having the contracted demand or sanctioned load of over 1 MW ($CD > 1000\text{KVA}$) to buy power from sources other than the State Distribution Utility. We offer electricity to industrial and commercial users under long-term PPAs under Third Party, Group Captive or Captive open access model as per prevailing state regulations.
- MERC also introduced Green Open Access dated 10th Nov '23 below 1 MW i.e. up to 100 KW contracted demand or sanctioned load.
- We are an experienced solar power developer in the field of open access. Our group companies have extensive experience and capabilities in the field of EPC for grid-connected utility-scale solar power projects. Our team of experienced professionals can manage the end-to-end implementation of solar power projects right from the conceptualization to execution and operations. We offer the most optimum and customized solutions to all our customers.

Open Access Features:

Howan Open access policy works:

- Power will be generated from one of the state solar farms (typically in a rural area where land is available).
- The Solar Power will be injected into the grid through existing sub-station.
- The power will then go through the existing grid infrastructure to large Consumers in the state.
- The Consumer for power could be a factory, an IT Park, a five-star hotel, a hospital, or anyone who has a minimum contract demand of 100 kVA.

Sustainability: Solar Power being one of the cleanest forms of energy generation, becomes an important motivator for a lot of corporates.

Source Up to 100% of Solar Energy: With open access solar power typically, corporates can source a very large fraction of their power through solar. (If you have a rooftop solar plant, typically you won't have enough roof space to generate enough power to meet majority of your power consumption)

Reduce Electricity Cost: The tariff of solar power is significantly low than cost of power through Discom (Utility).

Open Access Group Captive Term Condition:

- Commercial Terms & Conditions : The Consumer shall pay the seller Rs 35,00,000.00 (Rs. Thirty-Five Lac) per MW as 26% stake of Preferential Share in the form of equity at the time of signing of PPA. Dividend on equity shall be returned to Seller against yearly plant maintenance.
- Bank Guarantee: During the Term of this PPA, the Consumer shall maintain an unconditional and irrevocable bank guarantee ("Payment Bank Guarantee") for an amount equal to 3 (three) month the estimated average monthly billing.
- Operation & Maintenance: All plant operation and its maintenance along with security are carried out by Seller throughout PPA tenure.
- Statutory Compliances : Plant side statutory compliances along with renewal of EI, MEDA and MSEDCL fees done by Seller. Any statutory fees paid on behalf of Consumer it will be reimbursed to Seller.
- Infrastructure at Consumer Premises: Any alteration or changes at Consumer premises Viz. Metering cubicles, Meters and AB switch shall be in Purchaser scope.
- Project Insurance: Plant & machinery Insurance is in Seller scope.

Illustration of 1MW saving against Discom Bill under Open Access Solar PPA:

COMMERCIAL SAVING AGAINST 1000KW (AC) SOLAR PLANT MONTHLY

Hospital : Monthly Unit Generation per Month by 1MW AC Plant					145800
DESCRIPTION	MSEDCL		SOLAR		Saving Amount
	Rate	Amount	Rate	Amount	
Tariff Rate	10.93	15,93,594	4.75	6,92,550	9,01,044

Total		30,61,800		9,84,150	20,77,650

Advantage of Open Access Solar:

- Cost savings:

By purchasing solar power directly from a Generator, businesses can often access power at lower electricity tariffs compared to utility tariff, leading to significant cost reductions on electricity bills. Minimum investment & risk can get maximum financial benefit.

- Environmental benefits:

Switching to open access solar significantly reduces carbon emissions, contributing to sustainability goals and improving a company's environment friendly profile.

- Energy independence:

Access to renewable energy sources like solar power gives businesses more control over their energy supply and reduces reliance on fluctuating Utility/Discom prices.

- Flexibility in power procurement:

Open access allows companies to choose solar power Generator based on price, contract terms, and sustainability practices, customized energy needs. The PPA term can be 12 years to 25 Years with 7 years locking period

- Carbon Credit:

Carbon credits are a unit of measurement that represents the reduction of one metric ton of CO₂ or equivalent greenhouse gases. Carbon credits create a financial incentive for companies to reduce their carbon emissions.

- Brand reputation:

By utilizing open access solar, companies can enhance their brand image by showcasing their commitment to renewable energy.

THANK YOU
